

Question 1:

Write a JavaScript code snippet to prompt the user to enter their age.

After the user enters the age, calculate the movie ticket price according to the age entered:

- If the age is less than or equal to 12, display an alert box with the ticket price of **\$5**.
- If the age is between 13 (exclusive) and 59 (inclusive), display an alert box with the ticket price of **\$10**.
- If the age is 60 or above, display an alert box with the ticket price of **\$7**.

Question 2:

Write a JavaScript code snippet to prompt the user to enter the number of electricity units consumed.

After the user enters the units, calculate the electricity bill according to the units entered:

- If the units are less than or equal to 100, display an alert box with the bill amount of **\$20**.
- If the units are between 101 and 300 (inclusive), display an alert box with the bill amount of **\$50**.
- If the units are greater than 300, display an alert box with the bill amount of **\$80**.

Output should be displayed in an alert box.

Question 3:

Write a JavaScript function, that accepts a student's mark as a parameter.

- If the mark is **greater than or equal to 50**, display an alert message saying **"You Passed!"**
- Otherwise, display an alert message saying **"You Failed!"**

Call the function after prompting the user to enter their mark.

Question 4 :

Write a JavaScript function to prompt the seller to enter the **number of mobile phones sold**.

The price of each mobile phone is **\$800**.

Calculate the total price and display the result on the web page. The output should include both the price of each mobile phone and the total price. Output should be like this:

- The price of each mobile phone is \$800.
- Total price for X mobile phones is \$Y.

Question 5 :

Create the following form using **HTML**:

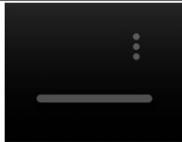

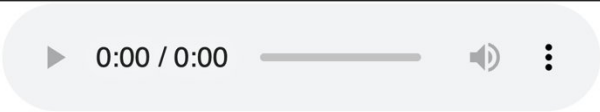

- Student Name (text field)
- Email (text field)
- Password (password field)
- Course (dropdown list: IT, Business, Engineering)
- Submit button

Write a **JavaScript** program to include the following validations for the data input through the form:

- The **Student Name** field should not be empty.
- The **Email** field should not be empty and must contain “@”.
- The **Password** should be at least 6 characters long.
- A **Course** must be selected.

Display suitable messages to the user based on the result of each validation.
