Lab sheet 05

Task: Build a “Happy Paws Pet Care” Website

You are required to design and develop a simple website for a pet care center called “Happy Paws Pet Care” using HTML and external CSS. Use the <section> tag to divide the page into meaningful content sections.

The header contains the website title, slogan, and navigation menu (Home, Services, Pets, Contact). Add hover effects for navigation links

Slogan: Love, Care, and Comfort for Your Pets

Add a welcome message and a “Book an Appointment” button. Add any animation of your desire. Ensure animations work correctly and smoothly.

Display 3 pet images. On hover, images should apply any type of CSS animation effect such as scale, rotate, grayscale, blur, brightness change, shadow effect, or any creative transform/transition animation

Create a table to display pet care services. Table rows should highlight when hovered.

Improve styling by adding smooth transitions if needed.

Pet Care Services

Service	Duration	Price
Pet Grooming	1 Hour	\$25
Pet Training	2 Hours	\$40
Pet Boarding	24 Hours	\$60

Add one main image to popup with a hidden text. On hover:

- Image should darken.
- “We Love Pets!” should appear.

Ensure popup effect works smoothly.

Create a form called “Appointment Form” for pet appointment booking. The form should include the following input fields:

- Owner Name
- Email Address
- Pet Type
- Additional Notes

Use suitable placeholder text for each input field (e.g., “Enter owner name”, “Enter your email”, etc.). Style the submit button to change color and scales slightly on hover.

Appointment Form

Owner Name:

Email:

Pet Type:

Additional Notes:

Add a copyright text. Keep styling consistent with the header.

Explain in comments what each animation does.

Ensure hover effects are smooth using **transition**.
