

Web-Based Application Development

25.3 Faculty of Computing

Lab sheet 06

Portfolio Development Task

You are required to create a **personal portfolio website** that presents your academic profile, technical skills, and completed projects. The portfolio should reflect your growth, abilities, and future goals.

What You Must Include

1. Home / Introduction Section

- Your full name
- A short introduction (2–5 sentences about yourself)
- Your academic background
- Career or learning objective

2. About Me Section

- Detailed personal profile
- Your interests (academic and technical)
- Strengths and skills
- Optional: profile photo

3. Education Section

- School / University details
- Qualifications obtained or currently pursuing
- Relevant coursework or subjects

4. Skills Section

Include both technical and soft skills such as:

- Programming languages (e.g., Python, Java, etc.)
- Web development skills (HTML, CSS, JS, etc.)
- Tools & technologies (Git, databases, frameworks, etc.)
- Communication and teamwork skills

5. Projects Section

Include at least **2–3 projects**, and for each:

- Project title
- Short description
- Technologies used
- Your role/contribution
- Outcome or result

6. Achievements / Certifications

- Awards or recognition
- Online courses completed (Coursera, Udemy, etc.)
- Hackathons or competitions participated in

7. Contact Section (Form)

Your form must include:

- Full Name
- Email Address
- Phone Number
- Gender (Male / Female)
- Services Required:
 - Web Development
 - UI Design
 - Maintenance
- Description
- Submit Button (“Send Message”)

Important Note

You are required to prepare a proper report along with your portfolio submission.

This documentation must include:

- Relevant code snippets used in your project
- Corresponding output screenshots of your portfolio

Use of AI Tools

If you have used any AI tools such as ChatGPT or other GPT-based systems to assist in writing code or designing your portfolio:

- You must clearly mention it in your documentation
- You should specify:
 - The tool used (e.g., ChatGPT)
 - The exact part of the code or section you generated or modified using the tool
 - A brief explanation of how you used it (e.g., “used to generate contact form structure” or “used to fix CSS layout issues”)
