Lab sheet 08

Task - Create a Student Registration Form with Validation

Create a web-based registration form using HTML and JavaScript that collects student details and validates user input before displaying the result.

Your form must include the following fields:

1. Student Name

- Text input

2. Age

- Number input

3. Email Address

- Email input

4. Gender

- Radio buttons
- Options: Male / Female
- Name: gender

5. Course Selection

- Drop-down list
- Options:
 - Information Technology
 - Data Science
 - Business Management
 - Software Engineering

6. Terms and Conditions

- Checkbox

7. Register Button

- Button type (not submit)
- Calls JavaScript function: register()

When the user clicks the Register button, your JavaScript function should:

Validation Rules:

1. Student name must not be empty.
2. Age must be 18 or above.
3. Email must not be empty.
4. Gender must be selected.
5. Terms and Conditions must be checked.

If all inputs are valid, display the following message below the form:

Registration Successful!

Student Name: tyla

Age: 16

Email: ewr@gmail.com

Gender: Female

Course: Information Technology

If validation fails, display appropriate error messages such as:

Please enter your name.

Age must be 18 or above.

Please select gender.

Please accept terms and conditions.
